Brainstorming & Idea Generation Template

ServiceNow Employee Data Import Project

Date	October 2026
Project Title	Import Data using Transform Maps (Spreadsheet)
Platform	ServiceNow (Import Sets, Transform Maps, Dashboards)
Team Members	Moorthy R (Team Lead), Priyan N (Member), KATHIRAVAN M (Member)

Executive Summary

This phase outlines the ideation process for implementing an automated Employee Data Migration solution into ServiceNow using Import Sets and Transform Maps. Bulk employee onboarding and updates often involve manual data entry, leading to duplicate records, incorrect field mappings, and excessive operational delays.

Problem Statement & Opportunity

- Manual data entry into ServiceNow target tables is prone to typos and missing attributes.
- Repeated spreadsheet imports cause redundant duplicate records if unique identifiers are not coalesced.
- Lack of real-time reporting makes tracking employee distribution and import health difficult.

Idea Generation & Prioritization Matrix

- Idea 1: Direct REST API integration (High effort, requires third-party middleware).
- Idea 2: Import Set Tables + Field Transform Mapping + Coalesce Deduplication (High Value, High Feasibility - SELECTED).
- Idea 3: Custom UI Action for manual CSV parsing (Medium Feasibility, higher error rate).

Brainstorming & Prioritization Matrix

Idea	Value	Feasibility	Selected Status
REST API Integration	High	Low	Deferred
Import Set & Transform Map + Coalesce	High	High	SELECTED
Manual UI CSV Parser	Medium	Medium	Rejected
